

Carbon Map & Cap™

CERE's Carbon Map & Cap™ program is designed to help companies by providing them with the necessary guidance to identify the most strategic environmental opportunities and make the connection between environmental performance and business value. By determining their environmental impact and particularly focusing on their GHG inventory and CDP response, CERE has helped its clients begin their journey on the road to responsible and sustainable development.

Program Components

- ▶ Assessment of an organizational or product **carbon footprint** based upon international standards such as the GHG Protocol, ISAE 3410 or ISO 14064.
- ▶ Analysis of emissions data to find carbon **hotspots and recommendations** on appropriate carbon mitigation strategies.
- ▶ **Benchmarking** of emissions data against relevant industry baselines and **target setting**
- ▶ Identification of climate change-related **risks and opportunities** to the business
- ▶ Support **reporting** the GHG inventory through relevant platforms such as CDP, DJSI, BRSR and CBAM
- ▶ **Environmental employee engagement** program that educates and empowers employees on sustainability.

Benefits to Companies

-  Accurate and comprehensive GHG inventory
-  Mitigation solutions that help cut operating costs
-  Improved brand image and increased investor confidence
-  Address climate change risks and capitalise on opportunities
-  Improved ESG performance across several parameters
-  Meet mandatory and voluntary reporting requirements
-  Leadership and skill training for employees

Other Services

-  Development of Carbon Calculators
-  Environmental Audits & Mapping Studies

Approach

- ▶ Defining operational and organizational boundaries
- ▶ Designing and implementing systems to capture GHG data
- ▶ Data mining and validation
- ▶ Development of quantification methodology
- ▶ Calculation of GHG emissions
- ▶ Reporting and Recommendations
- ▶ Developing mitigation strategies, roadmaps and targets
